

Microfiltration Systems

> SMT Series

The SMT Disc systems are a high quality microfiltration system, featuring stainless steel construction and a built in backwashing system, inspection covers and automatic controls.

Surface areas range from 12 to 125m², with maximum flow rates from: 1 to 8.6L/sec.

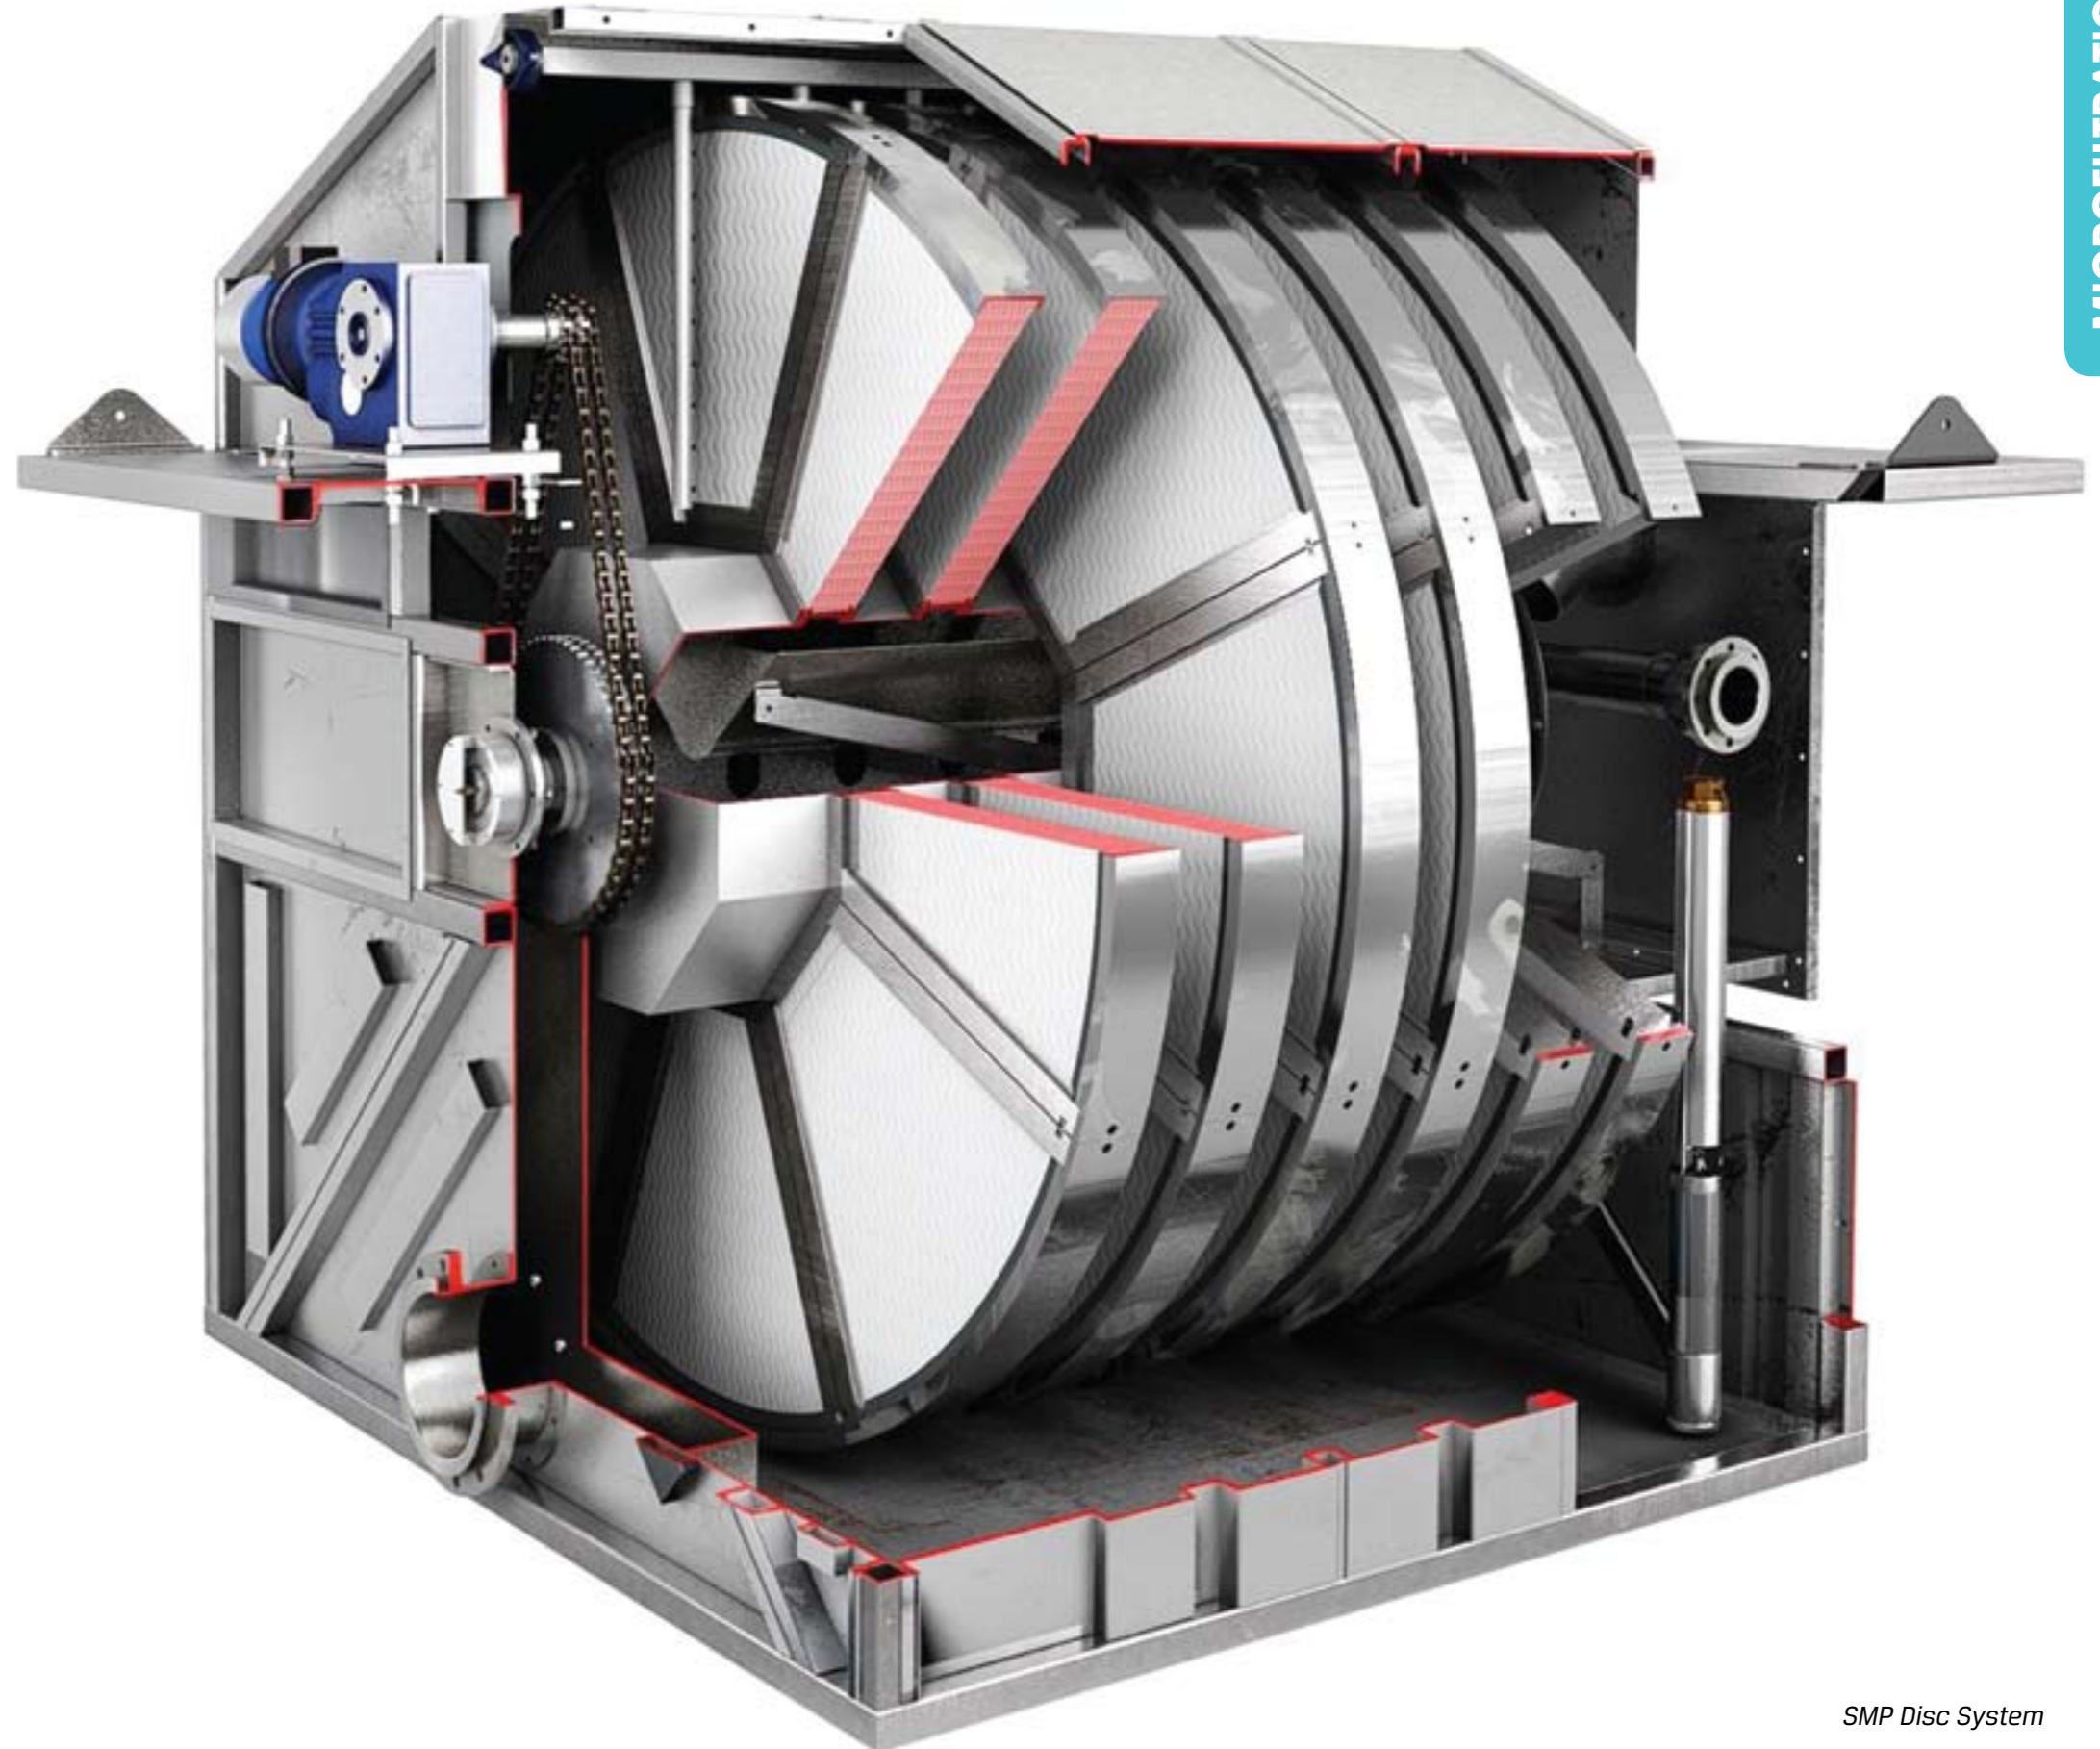

Complete packaged systems available.

> Media filtration

Media Filtration systems function through physical capture of pollutants, as well as adsorption of pollutants through chemical reactions. We offer a variety of media sources including; Quartz sand, Silica sand, Glass media, Zeolite, Anthracite coal, Garnet, Magnetite, etc.

Our media filtration systems can be supplied loose or packaged up on a skid system with pre-coagulation and post disinfection, etc.
